DETAILED ACTION

Status of Claims

1. This action is responsive to application filed on June 30, 2003. Claims 1-48 are pending examination.

Specification

2. The disclosure is objected to because of the following informalities: Update ¶ 1 with current serial number. Appropriate correction is required.

Claim Objections

3. Claim 33 objected to because of the following informalities: Claim 33 depends upon itself. Appropriate correction is required.

Claim Rejections - 35 USC § 112

- 4. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 5. Claim 1 recites the limitation "the remote destination" in line 7. There is insufficient antecedent basis for this limitation in the claim. Applicant is requested to correct any subsequent occurrence of this limitation in other claims.

Application/Control Number: 10/608,192 Page 3

Art Unit: 2157

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

- 7. Claims 1-48 rejected under 35 U.S.C. 102(e) as being anticipated by Bolik (US Patent No 6857053).
- 8. In reference to claim 1, Bolik teaches a system for managing the transmission of data, comprising:

an input interface to receive a plurality of message objects generated from data from at least one data source (column 6 lines 3-7);

a transport interface to a transport layer (column 3 lines 20-30); and

a communication engine, communicating with the input interface and the transport interface, the communication engine buffering the message objects for transmission to the remote destination via the transport layer (column 6 lines 18-34).

- 9. In reference to claim 2, Bolik teaches a system according to claim 1, wherein the at least one data source comprises a network (column 3 lines 12-20).
- 10. In reference to claim 3, Bolik teaches a system according to claim 2, wherein the network comprises at least one server (column 3 lines 12-20).
- 11. In reference to claim 4, Bolik teaches a system according to claim 3, wherein the network comprises a local area network (column 3 lines 15-20).

Art Unit: 2157

- 12. In reference to claim 5, Bolik teaches a system according to claim 1, wherein the transport layer comprises a Transport Control Protocol layer (column 3 lines 10-35).
- 13. In reference to claim 6, Bolik teaches a system according to claim 1, wherein the remote destination comprises a storage host (column 3 lines 21-26).
- 14. In reference to claim 7, Bolik teaches a system according to claim 1, wherein the communication engine queues the message objects in at least one output buffer (column 6 lines 18-34).
- 15. In reference to claim 8, Bolik teaches a system according to claim 1, wherein the at least one data source comprises a plurality of data sources (column 3 lines 12-20 and column 6 lines 3-7).
- 16. In reference to claim 9, Bolik teaches a system according to claim 8, wherein each of the data sources is associated with at least one corresponding session (column 6 lines 3-34).
- 17. In reference to claim 10, Bolik teaches a system according to claim 9, wherein the communication engine binds at least one session to at least one of a plurality of connections to the remote destination (column 6 lines 3-34).
- 18. In reference to claim 11, Bolik teaches a system according to claim 10, wherein the communication engine binds more than one session to at least one of the connections to the remote destination (column 6 lines 3-34).
- 19. In reference to claim 12, Bolik teaches a system according to claim 1, wherein the buffering of the message objects is performed at least in part according to a state of a message completion port (column 6 lines 3-37).

Art Unit: 2157

- 20. In reference to claims 13-24, claims 13-24 are method claims that correspond to the system claims of 1-12. Therefore, claims 13-24 are rejected based upon the same rationale as the rejections of claims 1-12.
- 21. In reference to claims 25-36, claims 25-36 are database claims that correspond to the system claims of 1-12. Therefore, claims 25-36 are rejected based upon the same rationale as the rejections of claims 1-12.
- 22. In reference to claims 13-24, claims 37-48 are message object claims that correspond to the system claims of 1-12. Therefore, claims 37-48 are rejected based upon the same rationale as the rejections of claims 1-12.

Conclusion

- 23. The claims have been given their broadest reasonable interpretation. Applicant is advised that the above specified citations of the relied upon prior art are only representative of the teachings of the prior art, and that any other supportive sections within the entirety of the reference (including any figures, incorporation by references, claims and priority documents) is implied as being applied to teach the scope of the claims.
- 24. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See attached Form 892.
